Gigaset Home Control –  
the simplest solution at hand

As the switchboard of the smart home, Gigaset telephones make home control as easy and secure as telephone calls.

CORDLESS HOME COMMUNICATION

**Gigaset**

## The integrated control for every home

**Gigaset Home Control is a simple and cost-efficient system for the control of all your household electronics. Siemens has enhanced its established cordless phones. Now, they serve as an open platform for manufacturers producing goods for in and around the house.**

This new system turns your telephone into the command center of your smart home. You'll gain security and comfort and save energy. Gigaset Home Control offers a variety of benefits:

### Gigaset cordless phones as the remote control for the smart home

- › replace a multitude of remote controls with only one
- › always ready for use and in reach
- › simplify handling of complete household

### Remote access

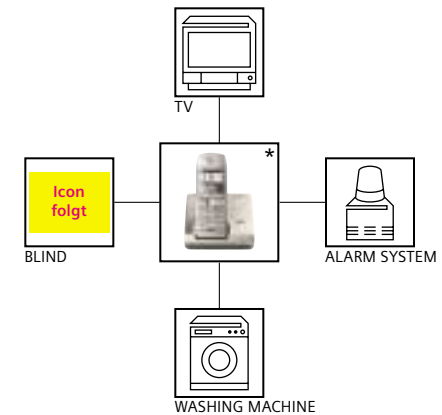

- › via telephone line: no additional connection or service fees
- › from all over the world with any mobile or fixed-line phone

### Gigaset Home Control components

- › are ideal for retrofitting, no additional cables necessary
- › are as easy to install as an additional handset (plug and play)
- › are supplied by Siemens and other brand manufacturers of appliances and equipment for the smart home
- › meet Siemens' high quality standards

### Gigaset Home Control is your entry into smart living

- › using a regular phone saves you money
- › there are low-priced starter packages for many applications
- › gradually expandable

DECT communication between telephone and household devices

## Gigaset Home Control: More is less

### More comfort – less trouble

Gigaset Home Control makes your home more comfortable. You can control all your devices with just one tool – your cordless phone. Outside the house, you'll be informed about alarms via your mobile. With this, you can also operate the most important functions.

As compatible devices or systems work like an additional handset, configuration and operation are as easy as registering a new telephone to the basestation.

### More options – less cost

Gigaset Home Control brings more security into the house. It controls the classical applications such as the alarm system, the lighting, the blinds or the heating and many more. And in the future, with digital TV receivers from Gigaset, even your TV will be integrated in the smart home. This way, all status signals and operation processes will be displayed on the screen. With every enhancement of Gigaset telephones (video capability, larger displays, etc.),

your Gigaset Home Control will develop further in a harmonic way and without much cost.

And even when purchasing a home control system you already save money – because the phone connection is carried out through your Gigaset telephone. You don't need expensive specific adapters for the phone and you don't incur mobile costs.

## Gigaset Home Control: the most beautiful remote controls

Gigaset telephones are incredibly widespread in the market. Because not only are they in front as far as their technology is concerned, but they are also customized for the most diverse wishes and needs: from highly comfortable ISDN telephones to voice and data combinations to simpler devices – every Gigaset telephone is made according to the individual preferences of our customers. Right down to its looks.

The following Gigaset telephones are already available today and support Gigaset Home Control:

## Gigaset Home Control: For the house. Around the house. Even from outside the house.

With Gigaset Home Control you won't have to hurry down into the basement only to find that the washing machine is still running. Instead it will send a notice to your Gigaset handset when it is done. An open fridge or freezer will activate an alarm. And with your mobile you can check from outside if your stove is still on and turn it off.

Gigaset Home Control will take care of the right lighting for television: a push of the button will dim the light and close the blinds. Further scenarios, e.g. for reading, are easily defined.

Check who is outside without leaving your veranda or your living room. Use your Gigaset handset to operate the intercom. If your deck or armchair is on the other side of the world, communicate via the phone – without the other person noticing.

Regulate your indoor climate with shutters or blinds, with air conditioning or a heating system. You can easily get the climate you want by lying on the sofa. Or prepare the house for your arrival via remote access through the telephone.

Are the lights out? With Gigaset Home Control you can switch off all lights from one central point when you leave the house.

Doors, windows and cellars are potential targets for housebreakers. These entrances can be secured by sensors for breakage of glass, motion detectors, etc. Gigaset Home Control enhances professional alarm systems with the ease of a remote control.

## The smarter household

**SIEMENS**  
serve@Home

serve@Home by Siemens comprises smart household appliances that are made to communicate with each other and with you.

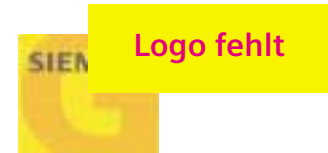

serve@Home is a partner of Gigaset Home Control. It enables you to control your home appliances remotely from wherever you are. Messages from your devices will be passed on to your Gigaset or mobile phone, which allows you to turn your appliances on and off.

You will recognize serve@Home products by the @-sign. Our complete range is already available in specialized trade: stoves, ovens, washing machines, refrigerators, air conditioning systems. And we are continually expanding our selection for your convenience.

## Security out of the socket

**GAMMA wave offers smart technology for the refitting of your household. From November 2005, a special adapter for the power socket will be available, linking all GAMMA wave components to Gigaset Home Control.**

This way you can turn off electronic devices (e.g. steaming irons or coffee machines) with a telephone call from outside. Or regulate lighting and blind scenarios in the house (e.g. for watching TV or reading). Alarms will be signaled on your Gigaset cordless telephone or forwarded to your mobile when you're out.

Radio-based, so no cables have to be laid, GAMMA wave is available for the following applications: lighting, control of shutters and blinds, door and window sensors for security systems and smoke detectors.

## Warema keeps the sun out

**Warema Renkhoff is the European market leader for sun blinds (roller shutters, awnings, internal and external venetian blinds as well as many other sun blind products).**

**Bild fehlt**

A number of Warema sun blinds can comfortably be remote controlled – from January 2006 also with Gigaset Home Control. A convenient and secure way to operate your Warema roller shutters and other Warema products via your Gigaset cordless phone or from outside via your mobile phone.

Your sun blind specialist will already offer you a wide variety of Warema EWFS®-ready products.
